

NEXT GENERATION REFUELING

PRIME FMS

PURPOSE AND BENEFITS

Prime FMS is a Cloud-Based Fuel Management System that utilizes state of the art / cutting edge technology to provide a truly unique dual-purpose FMS System. The dual-purpose nature of the technology means the system can be used as a retail forecourt service station system OR an own use commercial use system for back to base refueling applications all in the one phone App-based system.

Prime Cloud Server provides simple and cost-effective control and reporting of fuel pumping and dispensing systems from anywhere in the world.

PRIME FMS

A Licensed Mobile Application of Global Engineering Solutions and PRIME FMS "Next Generation Refueling"

PRIME FUEL MANAGEMENT SYSTEM

CLOUD BASED FUEL MANAGEMENT

INTRODUCTION

- Control your entire fuel network from the Cloud. Prime FMS allows you to convert your conventional fuel systems into a 24/7 unmanned refueling network.
- Users can gain access within 5 minutes and begin buying fuel from any Prime networked site.
- Prime FMS completely simplifies control over fuel dispensing and provides a lot of ease and convenience to the customers by converting conventional fleet cards to your smart-phone.
- This allows a person to fill their vehicle in any country that has a Prime FMS network.
- Prime FMS can work side by side with existing POS systems, as well as converting all of your existing fleet cards, HID, or fob buttons to a virtual card.
- The system can import your network into our Prime FMS and take over the management of your networks.
- Prime FMS Controller allows full tiering and management over pricing and discounts for loyal or larger volume customers.
- The system has a full range of restrictions on types and amounts of fuel that can be allocated to each vehicle and driver. No more lost cards or fobs, just simply activate or deactivate in the Cloud.
- Imagine the benefits of being able to join your independent gas station to a national chain of independent outlets AND receive a profit share of the fuel sale if your customer uses a network partner station out of your area!
- Allows independent fuel distributors or gas station owners to join their retail network to a nationwide independent network in a safe, secure and profitable manner.
- Allows you to turn existing commercial customer's use sites into retail network sites.
- Works with existing gas station forecourt POS systems so operators can use the inside POS console during business hours and switch to an unmanned site out of business hours.
- Turn your site into a 24-hour site simply, securely, and cost-effectively.
- System can communicate with over 100 different fuel pump / dispenser brands globally.
- Can be retrofitted to any type of fuel site anywhere on the planet.
- No requirements for fobs or cards – all phone App technology.
- Can be used as a commercial own use back to base fuel management system.

CONNECTION TO DISPENSERS

Prime FMS controller can simultaneously manage up to 64 refueling hoses. For example, you could have 64 sides of 1-sided dispensers or 32 sides of 2-sided fuel dispensers or a mixture of both with each dispenser up to 4 various communication protocols, as each of the pump ports can be adjusted to a separate communication protocol and baud rate and can connect up to 16 fueling places. This will facilitate being able to distribute all the 64 pumps between any of the pump ports.

PRIME FUEL MANAGEMENT SYSTEM

CLOUD BASED FUEL MANAGEMENT

REPORTS (PUMPS, SALES DATA AND TANKS)

Prime FMS changes grades, price volume measurements, and control of petroleum product parameters on site. Users can connect to Prime FMS cloud-server at any time and view reports, activate new users, communicate with current users, provide loyalty bonuses, and send promotions directly to the app.

- Independent reporting on sales at dispensers and movement of petroleum product at any site
- Volume throughput and data over what locations are selling or dispensing the most.
- Remote supervision over petrol station or petroleum depot operation
- Cloud-based reporting for your network of petrol stations and tank depots.

PRIME FMS PAYMENT SYSTEM

Prime FMS uses a contactless payment system. no more receipt printers, card readers, pin pads, and expensive payment systems.

Customer Convenience

The biggest advantage of using Prime FMS and mobile payments is that it makes it easier for your customers to pay you. Instead of customers pulling out their credit cards, cash, or writing a check, mobile payment supports contactless payments via smartphones and the Prime FMS mobile application.

This not only speeds up the fuel transaction process, but it also gives you the chance to engage with your customers throughout the entire customer journey. For example, using beacons allows you to send customers coupons when they're in proximity to your store, browse product descriptions while shopping, up-sell additional products, and accept payments wherever and whenever the customer prefers. By making it easier for your customers to make a payment and interact with them, you can increase conversions and turn these customers into ongoing repeat buyers. Customers no longer need to wait for fleet cards or fobs to be sent to start using the system. Just simply download the Prime App and get refueling in minutes.

PRIME FUEL MANAGEMENT SYSTEM

CLOUD BASED FUEL MANAGEMENT

Reduces Expenses

Prime FMS eliminates the need for you to purchase expensive point of sale equipment. For example, key fobs, EMV upgrades to pumps, receipt printers, or card readers). By simply downloading the Prime App on their mobile device and setting up their preferences, the customer can immediately join the next generation of fuel sales. There will be no more paper invoices for record-keeping because the invoice is stored in the account and emailed to the customer at the end of every transaction.

Integrates Loyalty Programs, Points and Rewards

Prime FMS has the ability to integrate loyalty and reward programs. Customers' information is stored in the Prime FMS mobile application and the platform panel – like being able to send customers a coupon when they're in proximity to your store. This means that customers can automatically receive reward points or coupons for every transaction that they make. These reward points and loyalty discounts could also be used as a form of payment in any of the Fuel Stations on the Prime FMS network.

Reports showing data regarding Money spent by customers, Redeemed Bonus Points and Received discounts.

Access to Actionable Data

Prime FMS can provide actionable customer data, such as how frequently they shop at your business, how much they spend, and what their preferred payment method is. This information can be used to target your customers based on their shopping behavior, patterns, demands, which improves customer service. When you improve customer service, you can increase your sales. Anticipating these customer needs ahead of time enables your business to exceed expectations.

PRIME FMS MOBILE APPLICATION

“One account, endless Possibilities!” The Prime FMS Mobile Application is run by Prime FMS Cloud. The mobile app and the controller know the communication protocols of a great variety of dispensers. It allows management over any of them. It is built for retail, fleet and commercial networks, anywhere in the world. Customers could potentially go on vacation and use their Prime FMS app to refuel in another county.

Welcome to the Next Generation of Refueling. Welcome to Prime FMS

Prime FMS Mobile Application Logo

Filter Tab allows the user to rearrange the Fuel Station Lists from different specific categories

List of Fuel Products available in that specific location and their respective prices

Dashboard Icon

Fuel Station Location and Type of Service Provided

“Starred” Icon allows the user to mark their most important location so they can easily find them later.

QR Code allows you to pinpoint a site if unsure of the location

Prime FMS Mobile Application Maps Page

Portable Dashboard that is accessible in the maps page with the click of a location pin icon

Pin icon to show a specific location of a Fuel Station within the web mapping service

Map Icon allows the mobile app user to access a web mapping service to locate Fuel Stations

Clicking the "Take Fuel" Button Leads you to the product page where you can select which type of Fuel to purchase.

After selecting your product, It directs you to the fueling page where it shows the type of product you're fueling, hose/pump number, and the price.

What separates the Prime FMS App from others is that aside from choosing the usual pre-authorize amounts in both Volume and Cost value, It also allows you to choose from a variety of payment methods, including fleet card, credit card or pre-paid, all from one platform.
